

Summit System Requirements Agreement G

PLEASE READ THE FOLLOWING CAREFULLY

1. Wireless Networks, non-Windows platforms and Dot Matrix printers are not supported with the use of Summit.
2. To ensure data integrity and system performance; servers with programs such as **Microsoft Exchange, SharePoint, Domain Controllers or Web/Intranet Servers** may cause problems with Summit and is recommended by Microsoft to run these on their own machines.
3. Although Brother Printers work fine with MS Windows, we do not recommend its use with Microsoft Office because we have found the documents and checks do not print correctly with these printers.
4. We understand that there are more companies using copiers now for printing. We have found that some copiers are having issues when printing Excel forms that have a lot of calculations and graphics on them. We recommend that a Universal PCL5 Printer Driver be installed from the manufacture and sometimes changing the screen resolution from the default 100% to 120% can correct it as well.
5. For Server installations make sure that the strong password complexity is turned off before SQL is installed.

Terminal Server and client/server connections greater than 20 require special attention. Please contact our IT Department for more information on Terminal Server Setups.

Please note if it's not in the requirements it is not supported. Please contact FPS if you have any questions.

SUMMIT VERSION 3.6 REQUIREMENTS

CPU	Workstation: 2.5 GHz Intel I5 class processor or higher Server or Standalone: 3.2 GHz Intel I7class processor or higher (Intel Celeron and AMD Duron are not supported)
Memory	Workstation: 10 Pro Editions - 8 GB or higher Peer to Peer: 10 Pro Editions - 8 GB or higher Server or Standalone: 16 GB or higher
Video	Graphics hardware acceleration requires a DirectX10 graphics card and a 1024 x 768 or higher resolution monitor
Disk Space	At least 250 GB of free space (workstation) 1 TB for server (Server: RAID 1 or 10 recommended for redundancy)
Operating System	Server: Windows Server 2012/ 2016/ 2019 Standard R2 Terminal Server: Windows Server 2012/ 2016/ 2019 standard configured for remote access. Summit is compatible with 32/64-bit versions of Windows. (Windows Server Recommended) Workstation: 10 Pro Editions .Net Framework 3.5 and newer <u>(HOME EDITIONS ARE NOT SUPPORTED)</u>
SQL	SQL 2005 IS NO LONGER SUPPORTED Full SQL 2008 or 2017 are required for server with more than (5) Workstation connections (Note: SQL 2008 and 2017 must have the XP_CMDSHELL Enabled for 3rd party software to work with them)
Network	Microsoft Windows 10/100/1000 NIC (Wireless networks not recommended)
Other Hardware	DVD Drive Back-up system**
Other Software	Microsoft Office 2010, 2013 and 2016 Pro Editions with the latest service packs on all workstations 32bit versions only. Enhanced Summit security features require Office 2010 and higher. Currently 64-bit versions of Office and 365 are not supported. (All workstations <u>MUST</u> have the same version of Office. Student Teacher Edition and any other Home Editions are not supported)
Remote Support	A remote connection\software must be supplied with file transfer ability on the workstations and server so proper support can be given. If Remote Desktop is used then drive sharing must be enabled. Note: We recommend Team Viewer which is supplied on all new installations and upgrades free of charge.
